## Worksheet 3.5: Mole Reaction Equations

REMEMBER to start by balancing the equations!

| 1 | $\mathrm{C}_{2} \mathrm{H}_{6}$ | + | $\mathrm{O}_{2}$ | $\rightarrow$ | $\mathrm{CO}_{2}$ | + | $\mathrm{H}_{2} \mathrm{O}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| a) | 10. moles |  |  |  |  |  |  |
| b) |  |  |  |  | 0.20 moles |  |  |

Parts a) and b) are completely separate (unrelated) scenarios

| 2 | $\mathrm{Mg}_{3} \mathrm{~N}_{2}$ | + | $\mathrm{H}_{2} \mathrm{O}$ | $\rightarrow$ | $\mathrm{Mg}(\mathrm{OH})_{2}$ | + | $\mathrm{NH}_{3}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: |
| a) |  |  |  |  |  |  | 0.48 moles |
| b) | 36 moles |  |  |  |  |  |  |

For each of the following word problems, you should SHOW your CHECK of the LAW of CONSERVATION of MASS.

3- A reaction between tin and oxygen produced 68.6 g of $\mathrm{SnO}_{2}$ (the only product). How many grams of tin and oxygen were involved?

4- A reaction between phosphorus and hydrogen yielded 10.5 g of phosphorus trihydride. How many grams of phosphorus and hydrogen were needed for the reaction?

5- Zinc and sulphur combine chemically to produce ZnS . How many grams of the sulphide are produced if 25.9 g of zinc reacts with sulphur? How many grams of sulphur were needed?

6- In the thermite process, aluminum reacts with $\mathrm{Fe}_{3} \mathrm{O}_{4}$ to $\mathrm{give}_{\mathrm{Al}_{2} \mathrm{O}_{3} \text { and iron. }}$
We will learn, in Chemistry 11, that compounds with unpredictable charges, such as in the $\mathrm{Fe}_{3} \mathrm{O}_{4}$, are completely possible!
If 40.2 g of iron are produced, find the masses of the other chemicals involved.

## Wkst 3.5: Mole Reaction Equations ANSWER KEY

| 1- | $2 \mathrm{C}_{2} \mathrm{H}_{6}$ | + | $7 \mathrm{O}_{2}$ | $\rightarrow 4 \mathrm{CO}_{2}+$ | $6 \mathrm{H}_{2} \mathrm{O}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| a) | 10. moles |  | 35 moles | 20. moles | 30. moles |
| b) | 0.10 moles |  | 0.35 moles | 0.20 moles | 0.30 moles |
| 2- | $\mathrm{Mg}_{3} \mathrm{~N}_{2}$ | + | $6 \mathrm{H}_{2} \mathrm{O} \rightarrow$ | $3 \mathrm{Mg}(\mathrm{OH})_{2}$ | $+2 \mathrm{NH}_{3}$ |
| a) | 0.24 moles |  | 1.4 moles | 0.72 moles | 0.48 moles |
| b) | 36 moles |  | 220 mol | 110 moles | 72 moles |

3. ? Moles of $\mathrm{SnO}_{2}=(1 \mathrm{~mole} / 151 \mathrm{~g})(68.6 \mathrm{~g})=0.454$ moles $\mathrm{SnO}_{2}$

| Sn |
| :--- | :--- | :--- |
| 0.454 moles |$+\mathrm{O}_{2} \xrightarrow{\rightarrow} \quad \rightarrow \quad$| $\mathrm{SnO}_{2}$ |
| :--- |
| 0.454 moles |

$? \mathrm{gO}_{2}=(32.0 \mathrm{~g} / \mathrm{mole})(0.454 \mathrm{moles})=14.5 \mathrm{~g} \mathrm{O}_{2}$
?gSn=(119g/mole)(0.454moles) $=54.0 \mathrm{~g} \mathrm{Sn}$

## Check:

$\Sigma$ mass of reactants $=\Sigma$ mass of products
$54.0 \mathrm{~g}+14.5 \mathrm{~g}=68.6 \mathrm{~g}$
$68.5 \mathrm{~g}=68.6 \mathrm{~g}$
Good!
4. The reaction needed 9.59 g of phosphorus and 0.937 g of hydrogen.
5. 12.7 g of sulphur were required to react with the zinc to produce 38.6 g of zinc sulphide.
6. Mass of $\mathrm{Al}=17.3 \mathrm{~g}$ Mass of $\mathrm{Fe}_{3} \mathrm{O}_{4}=55.4 \mathrm{~g}$ Mass of $\mathrm{Al}_{2} \mathrm{O}_{3}=32.6 \mathrm{~g}$
