**CARBON CYCLE**

Fossil Fuels Are Increasing The Concentration Of CO2 In The Hydrosphere And Atmosphere.

Human activities release additional carbon dioxide which ruins the concentration of the cycle.

Help. You help us.

Daquish\_Johnson12 The carbon cycle is one of the most important parts of our community and life it shapes who we are. So, we are increasingly ruining the cycle of carbon dioxide. A way you can help is taking care of our forest and waters and nature in general by trying to reduce burning fossil fuels. Also, managing farmlands better, so all in all protect and preserve and help the cycle of the carbon keep up to date. #cycleoflifefoundation #nature

Daquish\_Johnson12 Here is a video on the impact in the BC wolf cull it is a 1 minute and 30 second video about how the professionals are killing to many wolfs and it is impacting the population of deer etc. it is impacting the deer because its predator is almost know more and it means that the deer are over feeding on the grass which means there wont be much left for the next generation. It is really impacting the world right now! Thanks to our special guest @samanthagreen\_knows Also, my co host @daquavion for chipping in on this interview.

Daquish\_Johnson12 This is a food web made by a grade 9 student in Alberta about what the ecosystem looks like and how every animal is connected. This is why I post and present the problems that our nature has is for this reason exactly its to show the young that we need to keep our ecosystem safe. You can see how the bear eats the grouse caribou and berries but, for the bear to eat the grouse have to eat the rocks and the caribou have to eat the berries so the bear can stay alive and the caribou and grouse can stay alive etc. Thank you so much @KaydenFortworth for your amazing food web.

Daquish\_Johnson12 This is a quick preview of a cool GIF that one of our fans sent in and it was so amazing and insightful. The GIF was about how the pollution is getting passed on through the ocean for example in this picture a dolphin has pollution inside of it because it eat a fish with the pollution. Now this just shows how we impact our society. Now follow us to see more stuff like this and see how you can't help our environment.

**THE ATMOSPHERE HOW DO WE IMPACT IT?**

We impact it by driving our vehicles more often than we should.

We also impact the atmosphere by drinking our bottled water building our plastic buildings and changing the environment.

Help. You help us.

Daquish\_Johnson12 This is a poster that represents truthfulness and understanding this poster shows truthfulness because of how we are impacting the atmosphere but not just that the specific details show truthfulness. Now it also shows understanding because the people on this earth are realizing that we are ruining the earth and we need to make a change. Thanks, @cycleoflifefoundation #earth
