## Reaction Rate Review

1. $\mathrm{C}_{5} \mathrm{H}_{12}$ Rate $=\left(28.8 \mathrm{~g} \mathrm{C}_{5} \mathrm{H}_{12} / 30 . \mathrm{S}\right)\left(1{\text { mole } \mathrm{C}_{5} \mathrm{H}_{12} / 72.0 \mathrm{~g} \mathrm{C}}_{5} \mathrm{H}_{12}\right)$ $=0.013 \mathrm{~mol} \mathrm{C}_{5} \mathrm{H}_{12} / \mathrm{s}$

| $\mathrm{C}_{5} \mathrm{H}_{12} \mathrm{~g}^{\text {) }}$ | + | $8 \mathrm{O}_{2(\mathrm{~g})}$ | $\rightarrow$ | $5 \mathrm{CO}_{2(\mathrm{~g})}$ | $+$ | $6 \mathrm{H}_{2} \mathrm{O}_{(\mathrm{g})}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0.013 |  | 0.10 |  | 0.065 |  | 0.078 |
| $\mathrm{mol} / \mathrm{s}$ |  | $\mathrm{mol} / \mathrm{s}$ |  | $\mathrm{mol} / \mathrm{s}$ |  | $\mathrm{mol} / \mathrm{s}$ |

2. $\mathrm{N}_{2}$ Rate $=\left(112 \mathrm{~L} \mathrm{~N} / 2 \mathrm{l}\right.$. s) $\left(1 \mathrm{~mole}_{2} / 22.4 \mathrm{~L}\right)=0.50 \mathrm{~mole} \mathrm{~N}_{2} / \mathrm{s}$
$\mathrm{N}_{2}$ Rate $=14 \mathrm{~g} / \mathrm{s}$
$\mathrm{H}_{2}$ Rate $=3.0 \mathrm{~g} / \mathrm{s}$
$\mathrm{NH}_{3}$ Rate $=17 \mathrm{~g} / \mathrm{s}$
3. $\quad \mathrm{C}_{2} \mathrm{H}_{6}$ Rate $=\left(1 \mathrm{~mole}_{2} \mathrm{H}_{6} / 30 . \mathrm{g} \mathrm{C}_{2} \mathrm{H}_{6}\right)\left(96 \mathrm{~g} \mathrm{C}_{2} \mathrm{H}_{6} / 10 . \mathrm{min}\right)(1 \mathrm{~min} / 60 \mathrm{~s})$

$$
=0.0053 \mathrm{~mole} \mathrm{C}_{2} \mathrm{H}_{6} / \mathrm{s}
$$

$\mathrm{C}_{2} \mathrm{H}_{6}$ Rate $=0.16 \mathrm{~g} / \mathrm{s}$
$\mathrm{O}_{2}$ Rate $=0.42 \mathrm{~g} / \mathrm{s}$
CO Rate $=0.31 \mathrm{~g} / \mathrm{s}$
$\mathrm{H}_{2} \mathrm{O}$ Rate $=0.29 \mathrm{~g} / \mathrm{s}$
4. $\mathrm{NH}_{3}$ Rate $=25 \mathrm{~L} / \mathrm{min}$
$\mathrm{O}_{2}$ Rate $=43 \mathrm{~L} / \mathrm{min}$
$\mathrm{NO}_{2}$ Rate $=25 \mathrm{~L} / \mathrm{min}$
$\mathrm{H}_{2} \mathrm{O}$ Rate $=$ not gaseous so no rate in L/min
5. Watch out for excess stoichiometry! HCl is limiting reagent! $\mathrm{H}_{2}$ Rate $=3.4 \mathrm{~L} / \mathrm{min}$
6. The likelihood of 4 reactant particles having a simultaneous collision with appropriate energy and geometry is negligible. Reactions occur via collisions of 2 particles at a time. Two possible mechanisms are:

Or

$$
\begin{aligned}
& \mathrm{S}+\mathrm{O}_{2} \rightarrow \mathrm{SO}_{2} \\
& \mathrm{SO}_{2}+\mathrm{O}_{2} \rightarrow \mathrm{SO}_{3}+\mathrm{O} \\
& \mathrm{H}_{2}+\mathrm{O} \rightarrow \mathrm{H}_{2} \mathrm{O} \\
& \mathrm{SO}_{3}+\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{H}_{2} \mathrm{SO}_{4}
\end{aligned}
$$

$\mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow \mathrm{H}_{2} \mathrm{O}_{2}$
$\mathrm{S}+\mathrm{O}_{2} \rightarrow \mathrm{SO}_{2}$
$\mathrm{SO}_{2}+\mathrm{H}_{2} \mathrm{O}_{2} \rightarrow \mathrm{H}_{2} \mathrm{SO}_{4}$
7.
a) Fast: only electrons being exchanged, homogeneous phase initially, simple mechanism
b) Slow: many bonds to break and form, complex reaction mechanism (many particles)
c) Medium: simple mechanism with few bonds to break and form, but mixed phases will slow the reaction
d) Slow: non-reactive inert gas
e) Fast: only electrons being exchanged, homogeneous phase initially, simple mechanism
