

Barney is the most beautiful B-cell ever. Barney's job is to produce the antibodies that protect the body from foreign invaders. We'll get to those later. Barney (and all the other B-cell who aren't shown here) are basically like the parents to all the antibodies. That's why Barney is surrounded by all the antibodies. He is the one that looks after them.

Barney lives in the immune system with Emily and Marty. Barney is the third in command. Marty is first in command, Emily is second, and Barney is third.
