

**PROJECT** 

ALBERTA 2019

PLP 9

DATE

**SEPT 15-23** 

CLIENT

THOMAS JAAKKOLA

## Fri Sept 13

We are leaving in two days.

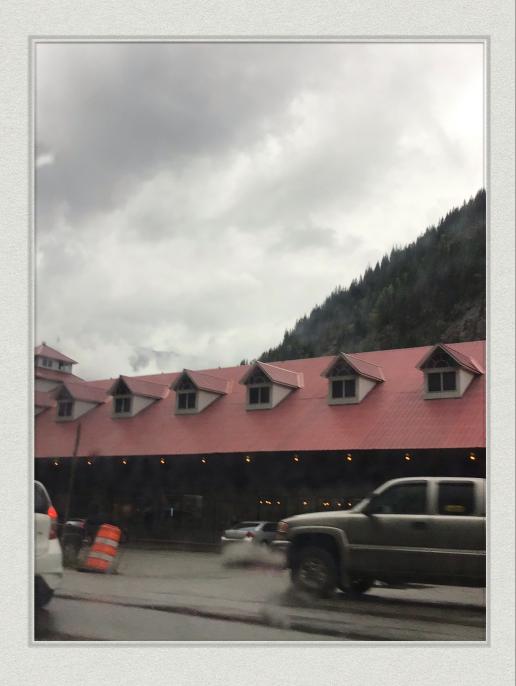

There are multiple things I'm looking forward to. Number one is the wolf place. Number two is the Calgary hotel. Number three is the buffalo ranch and number four is the ice field.

Still at seycove. — — — — — —

# Three valley gap

\* On the daily writing prompt today the question was "three valley lake chateau has been around since the 1960's. From what you saw today what changes has this gone through to adapt. I think that this hotel had to go through a lot of changes to adapt. One of the changes is to make it more touristy and to promote it in the right times. Another change is to add more to it. One thing that has stayed the same is the themes of the place. The last thing that stayed the same is the traditions. At this hotel the owner has is the so of the founder so it is a family thing passed down through generations.

#### Day three

\* The question today is What ways did you see change today in the geography? I have thought a bit on this question and I have a couple answers to this question.

Today the landscape change dramatically from mountains to huge mountains. And very large elevations. There is no room for any farming or things like that in the mountains. This area has no industry because it is very hard to get everything to the middle of the mountains.

# Sept 17 (Columbia ice field)

\* Today we have two options and the option I chose number 2. The question is what are some of the reasons people visited the park a 100 years ago? Why do people still visit today? Some of the reasons people visited were the natural beauty and the wildlife. They also visited because it is a huge change from their towns and life. They still visit today is because of the amazing natural beauty and the craziness of the mountains. That is my daily note for sept 17

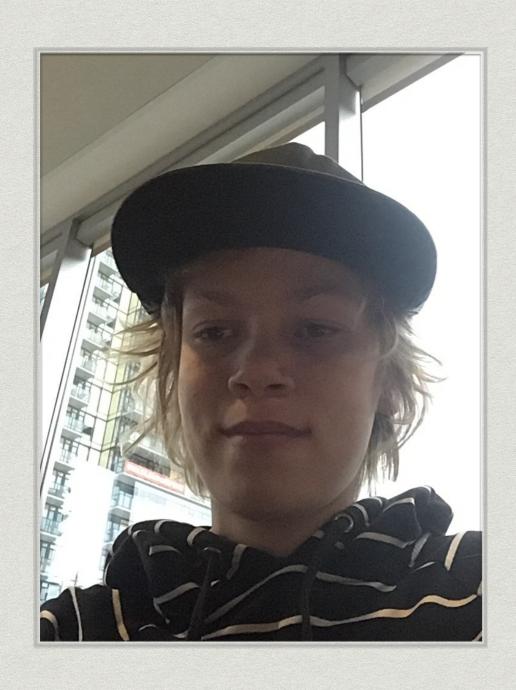

\* Today's question is Why do we have national parks and what role does the federal government have in maintaining them. What has changed what has not changed. The reason we have national parks is because the government thought that these areas are special. One thing that has changed is the wildlife and the environment in these areas. Something that has not change is the protection of these areas.

\* Today's question is hat do you think makes up Canadian identity? Over time, how do you think Canadian identity has changed or stayed the same? I think that Canadian identity comes from a lot of things. But in the end canada is a diverse culture with tons of people so as time went on understanding of this diversity grew more and more.

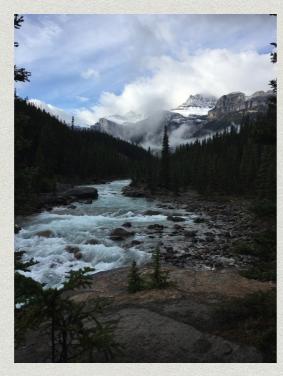

\* Today we are just checking in on how the project video is going.

Today at this moment the project is going pretty good. I have tons of stock footage and some interviews and still have one more main stop for my project. I think that my thing is pretty good and I feel like I'm making good progress. The daily note for sept 20.

The question today is how is your group connected with the driving question. I think that each of the groups has a lens that makes up the identity of canada and the places in canada. Each of these groups are wildlife (I'm wildlife), business, First Nations, students, politics, and people. And more. Each one of these groups makes up the identity of canada

\* Today's daily note was pretty much what did you enjoy on this trip and what impacted you on this trip? I personally enjoyed the entire trip and everything on it. This trip also impacted me because I got to see what the prairies and the Rocky's are like. This has actually changed my perspective on canada.

# Sept 23(Great Depression)

- \* Today we are reflecting on the first note. I think that I loved all the stops that were listed as where I think I'd really like. This-trip also was fun in every aspect. In the end I think this was an amazing trip even I'm sick.
- \* (The reason why its depression is because we did not go on the roller coaster.)
